RADIATOR [SKYACTIV-D 1.5]

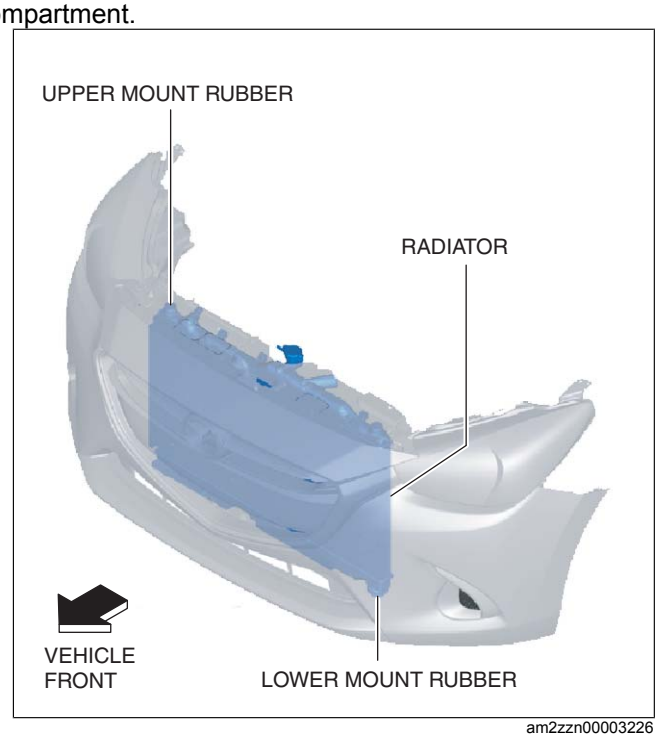

id0112q2158500

Purpose, Function

- The radiator disperses the engine coolant heat flowing internally by receiving air flow blown against the vehicle while it is driven or air flow produced by the cooling fan.

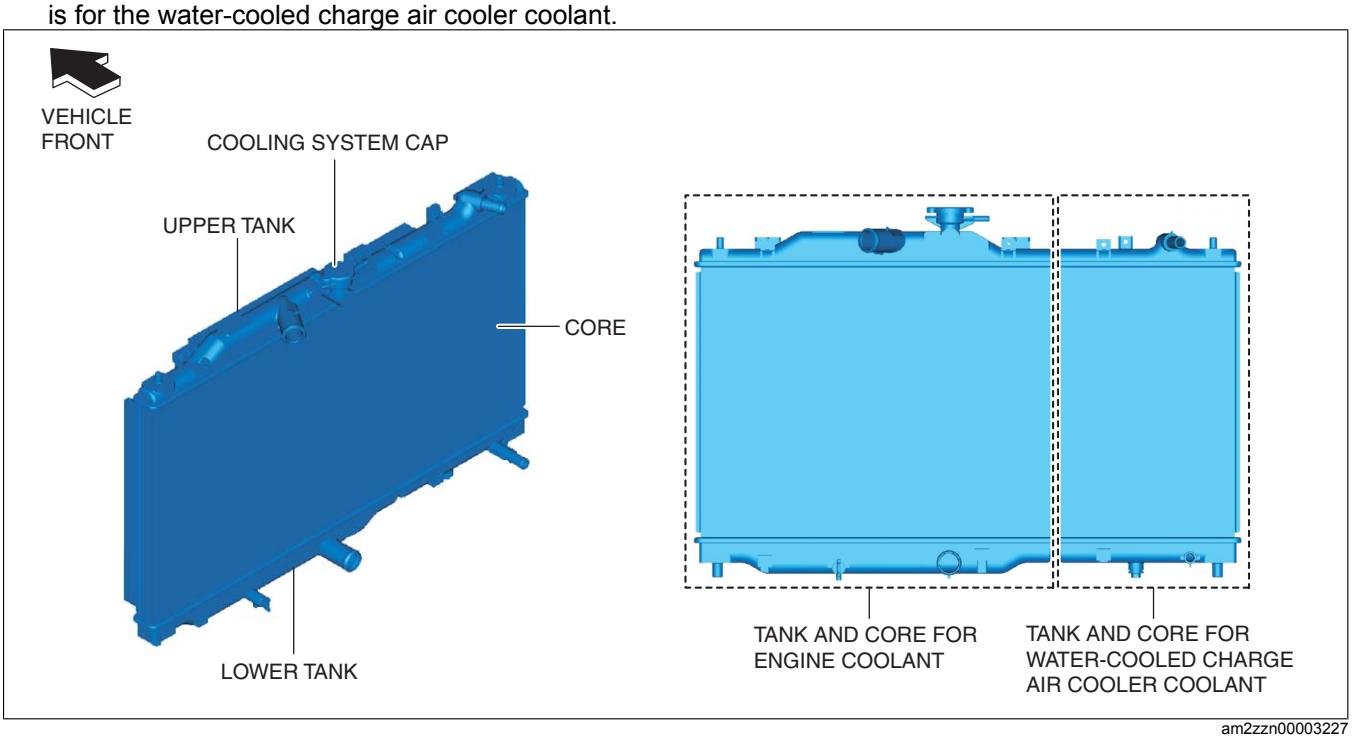

Construction

- The radiator is located at the front part in the engine compartment.
- Four mounting rubbers are utilized to decrease vibration.

am2zzn00003226

- A down-flow radiator with corrugated fins has been adopted.
- The radiator tanks are made of plastic and the core is made of aluminum for weight reduction.
- The inside of the tank and core is divided into two sections; one section is for the engine coolant and the other is for the water-cooled charge air cooler coolant.
