WATER-COOLED CHARGE AIR COOLER [SKYACTIV-D 1.5]

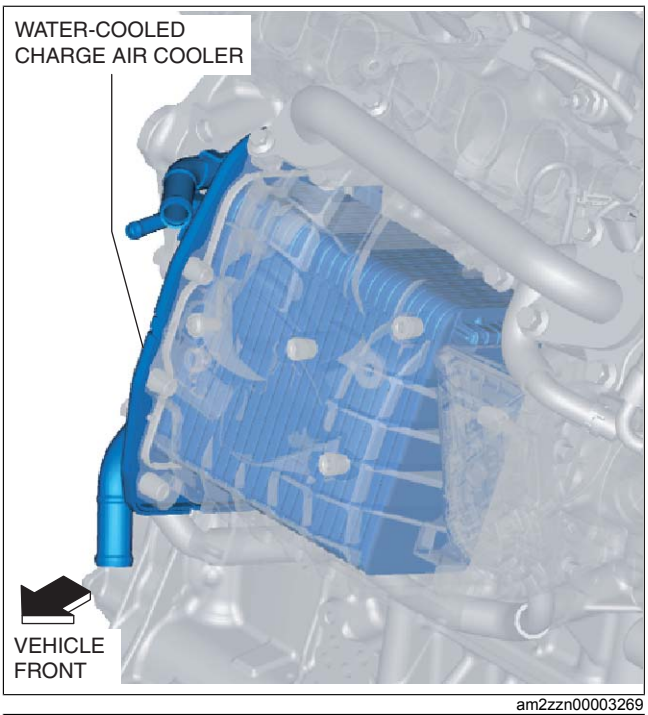

id0113q2709600

Purpose, Function

- The water-cooled charge air cooler is charged by the turbocharger with variable turbine geometry and cools the high-temperature, expanded intake air.
- A water-cooled charge air cooler has been adopted which cools the charged intake air using a special coolant.

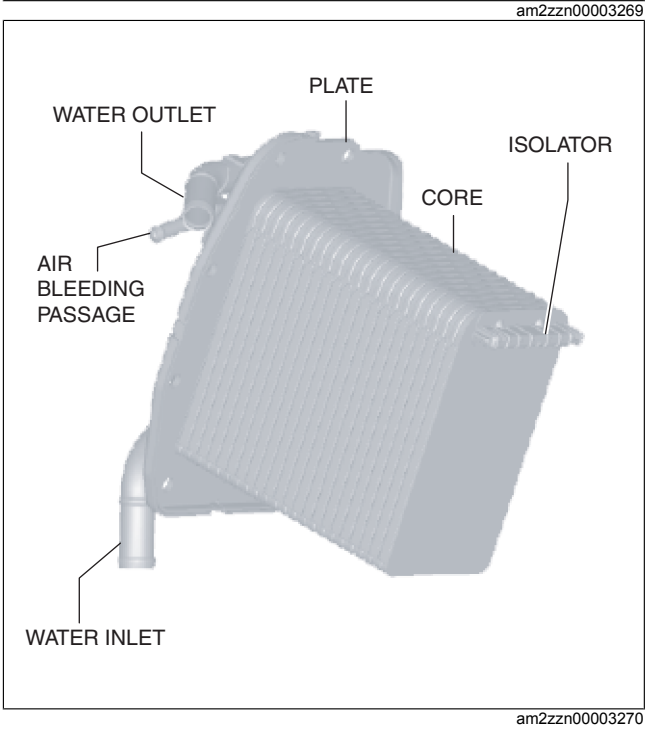

Construction

- The water-cooled charge air cooler is located in the intake manifold.

am2zzn00003269

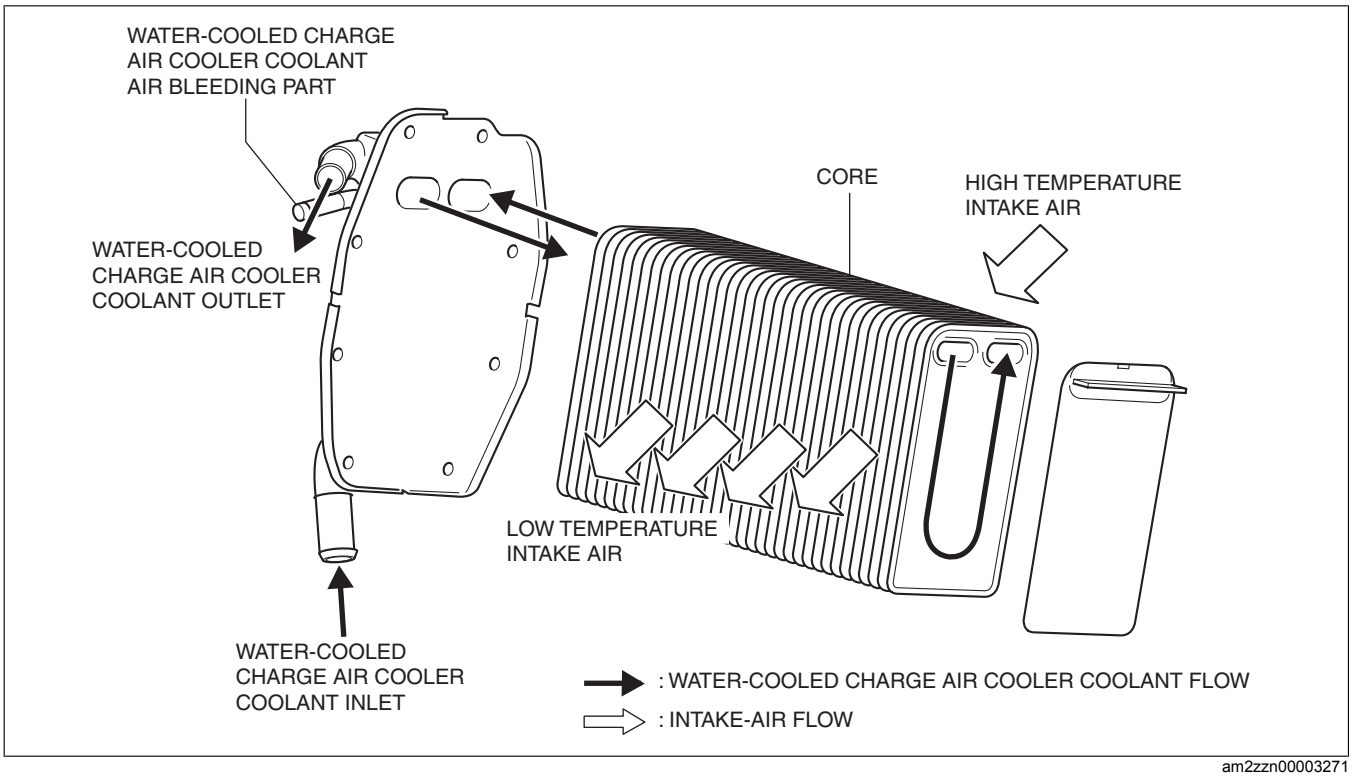

- The water-cooled charge air cooler consists of the core, plate, insulator, water inlet, and water outlet.
- A corrugated fin type water-cooled charge air cooler has been adopted.
- When replacing the water-cooled charge air cooler coolant, an air bleed passageway is established for bleeding air in the core area.

am2zzn00003270

Operation

- The water-cooled charge air cooler is charged by the turbocharger with variable turbine geometry, and the high-temperature, expanded air is cooled by the coolant.
