RETURNLESS FUEL SYSTEM [SKYACTIV-G 1.3, SKYACTIV-G 1.5]

id0114q1103900

Outline

- To reduce fuel evaporation in the fuel tank, the returnless fuel system adjusts the fuel amount (fuel pressure) ejected from the fuel pump and prevents fuel warmed in the engine compartment from returning.

System Diagram

Structure

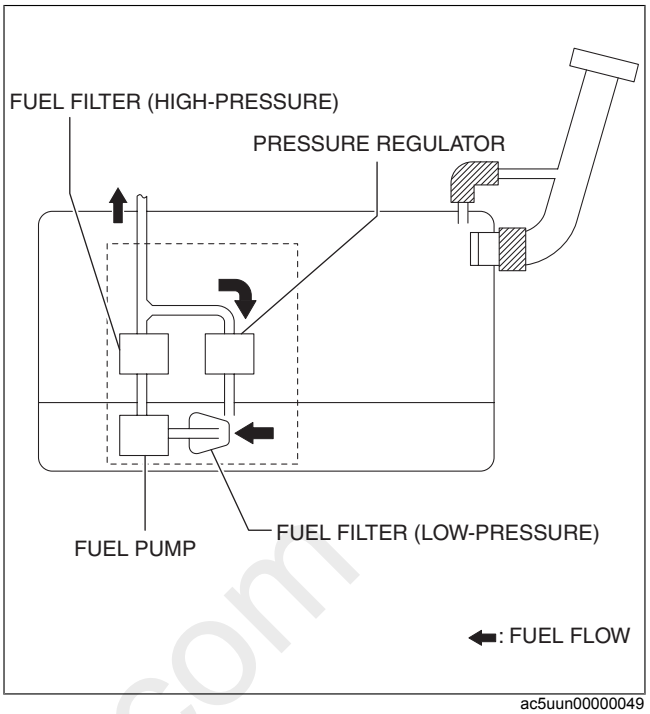

- The returnless fuel system consists of the following parts:

Part name	Reference
Fuel filter (low-pressure)	(See FUEL PUMP UNIT [SKYACTIV-G 1.3, SKYACTIV-G 1.5].)
Fuel filter (high-pressure)	
Pressure regulator	
Fuel pump	

carmagn.com

Operation

- Fuel in the fuel tank is pumped out through the fuel filter (low-pressure) by the fuel pump, filtered by the fuel filter (high-pressure), and then regulated to a specified pressure by the pressure regulator. The regulated fuel is sent to the high pressure fuel pump, and unnecessary regulated fuel is returned from the pressure regulator to the fuel tank.
