WATER-COOLED CHARGE AIR COOLER [SKYACTIV-D 1.5]

id0180q2002500

Purpose of Adoption
- For improved accelerator pedal response, the intake air passage capacity to the separate type water-cooled charge air cooler of the SKYACTIV-D 2.2 has been reduced by half from **8 L {8 US qt, 7 Imp qt}** to **4 L {4 US qt, 4 Imp qt}**.
- In addition, a water-cooled type charge air cooler has been adopted with an exclusive engine coolant circuit and an electronically controlled water pump to supply a constant, optimum amount of intake air temperature.

Service Point
- The charge air cooler is built into the intake manifold, and it differs from the SKYACTIV-D 2.2.
- Two radiator caps with differing valve opening pressures, one for the engine cooling and the other for the charge cooler, are in the engine compartment.

Common Inquiry
