REAR SUSPENSION

id021400113000

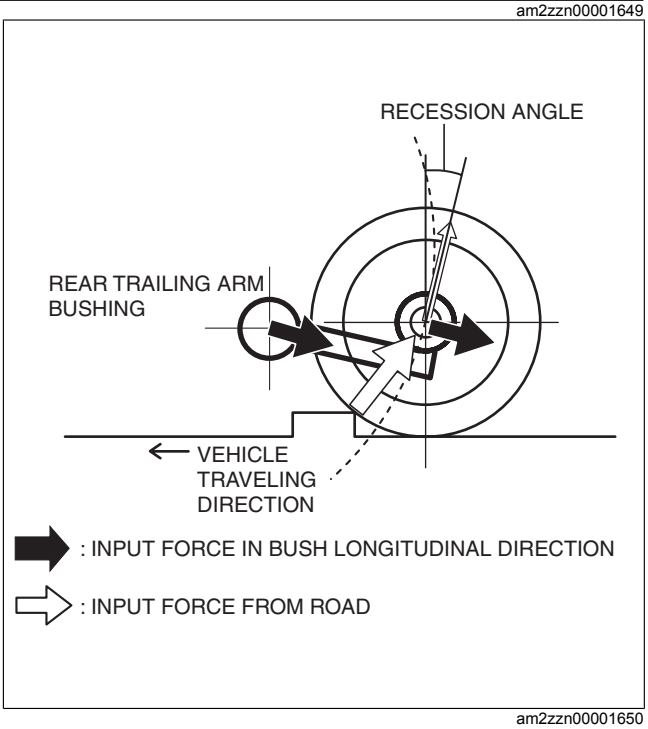

Outline

- Torsion beam axle-type rear suspension has been adopted.
- Large-size rubber bushing has been adopted for the rear trailing arm bushing to enhance the ride comfort.
- The rear shock absorber and the coil spring are positioned separately to increase cabin space.
- Highly rigid rear torsion beam with V-shape cross section has been adopted to assure a high camber and toe rigidity.

am2zzn00001649

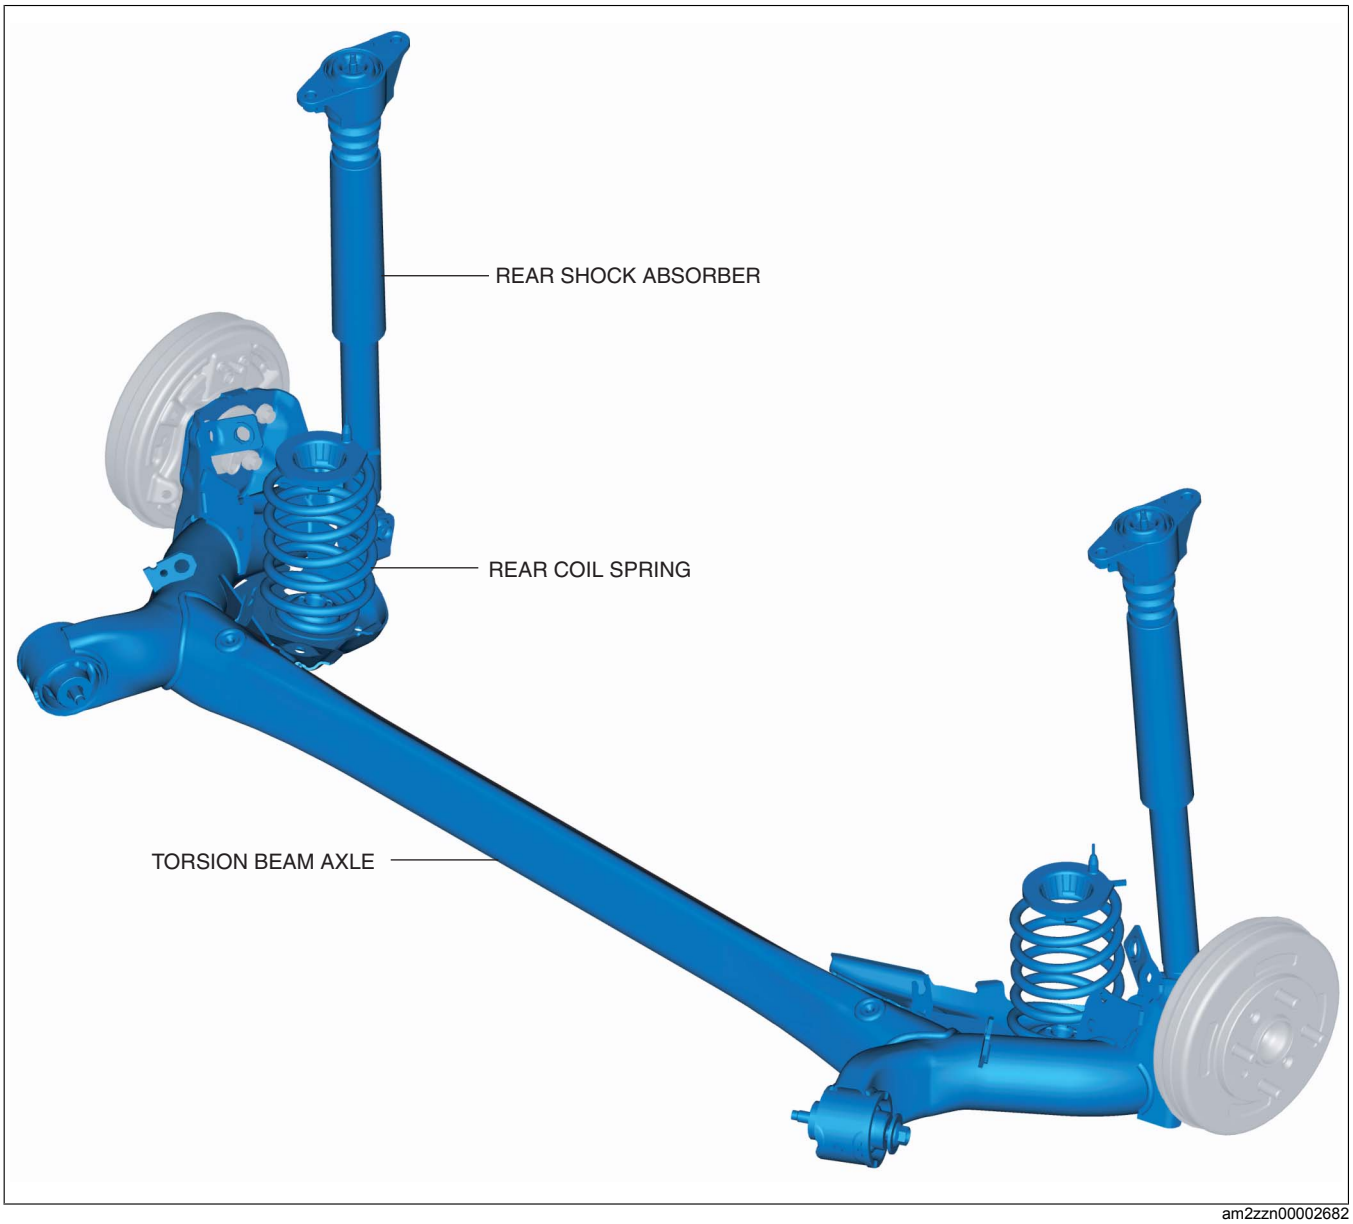

- Ride comfort has been enhanced by raising the rear trailing arm installation position and reducing the longitudinal input to the rear suspension.
