POWERTRAIN SYSTEM OUTLINE [CW6A-EL]

id0517l1351000

Outline

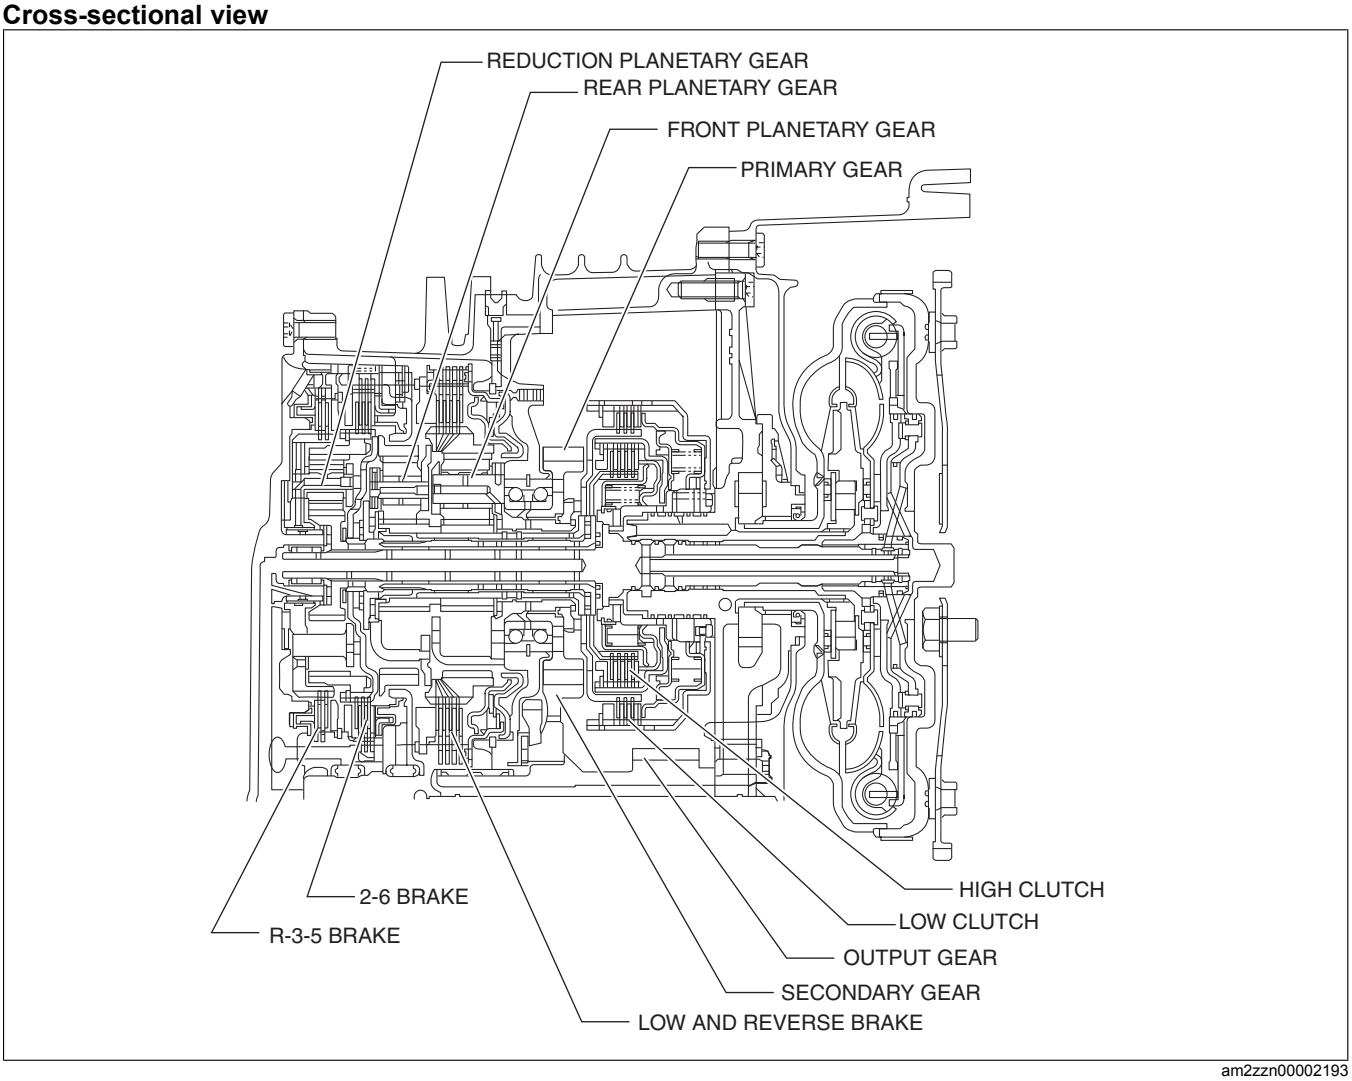

- The powertrain consists of a 2-piece multi-plate clutch, 3-piece multi-plate brake, a double pinion gear-type planetary gear, and a 2-piece single-type planetary gear.

Construction

Component parts list

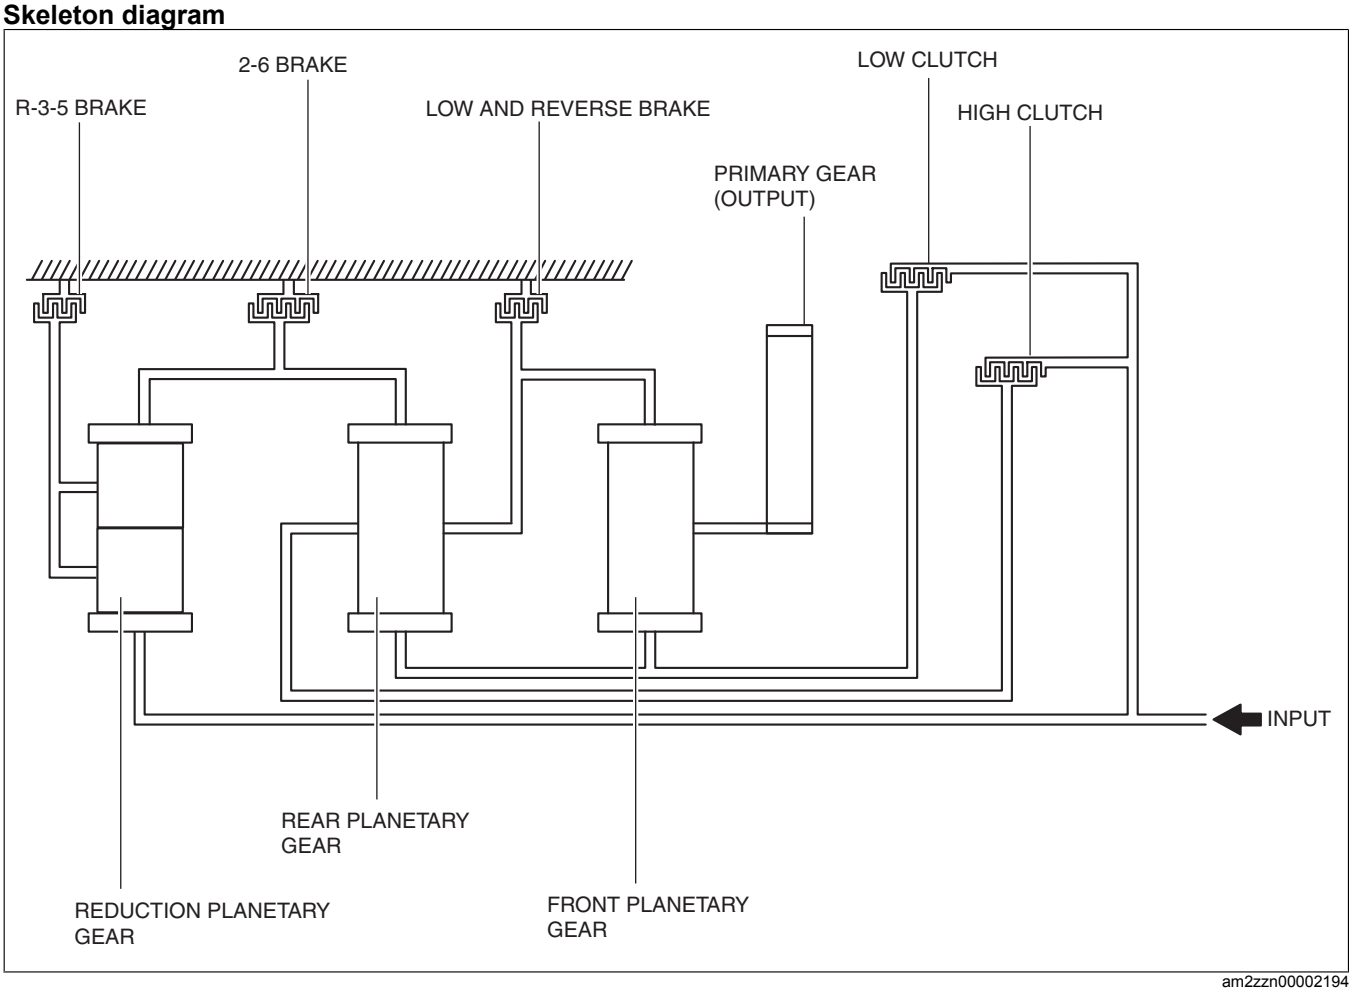

Component parts		Movement
Multi-plate clutch	Low clutch	Transmits drive force from turbine shaft to front and rear sun gears
	High clutch	Transmits drive force from turbine shaft to rear planetary carrier
Multi-plate brake	R-3-5 brake	Locks reduction planetary carrier against rotation
	2-6 brake	Locks rear internal gear and reduction internal gear against rotation
	Low and reverse brake	Locks front internal gear and rear planetary gear against rotation
Single-type planetary gear	Front planetary gear	Converts drive force transmitted from engine by operation of each clutch and brake, and transmits it to primary gear. (Operates transaxle.)
	Rear planetary gear	
Double pinion gear-type planetary gear	Reduction planetary gear
