REFRIGERANT LINE

id071100002400

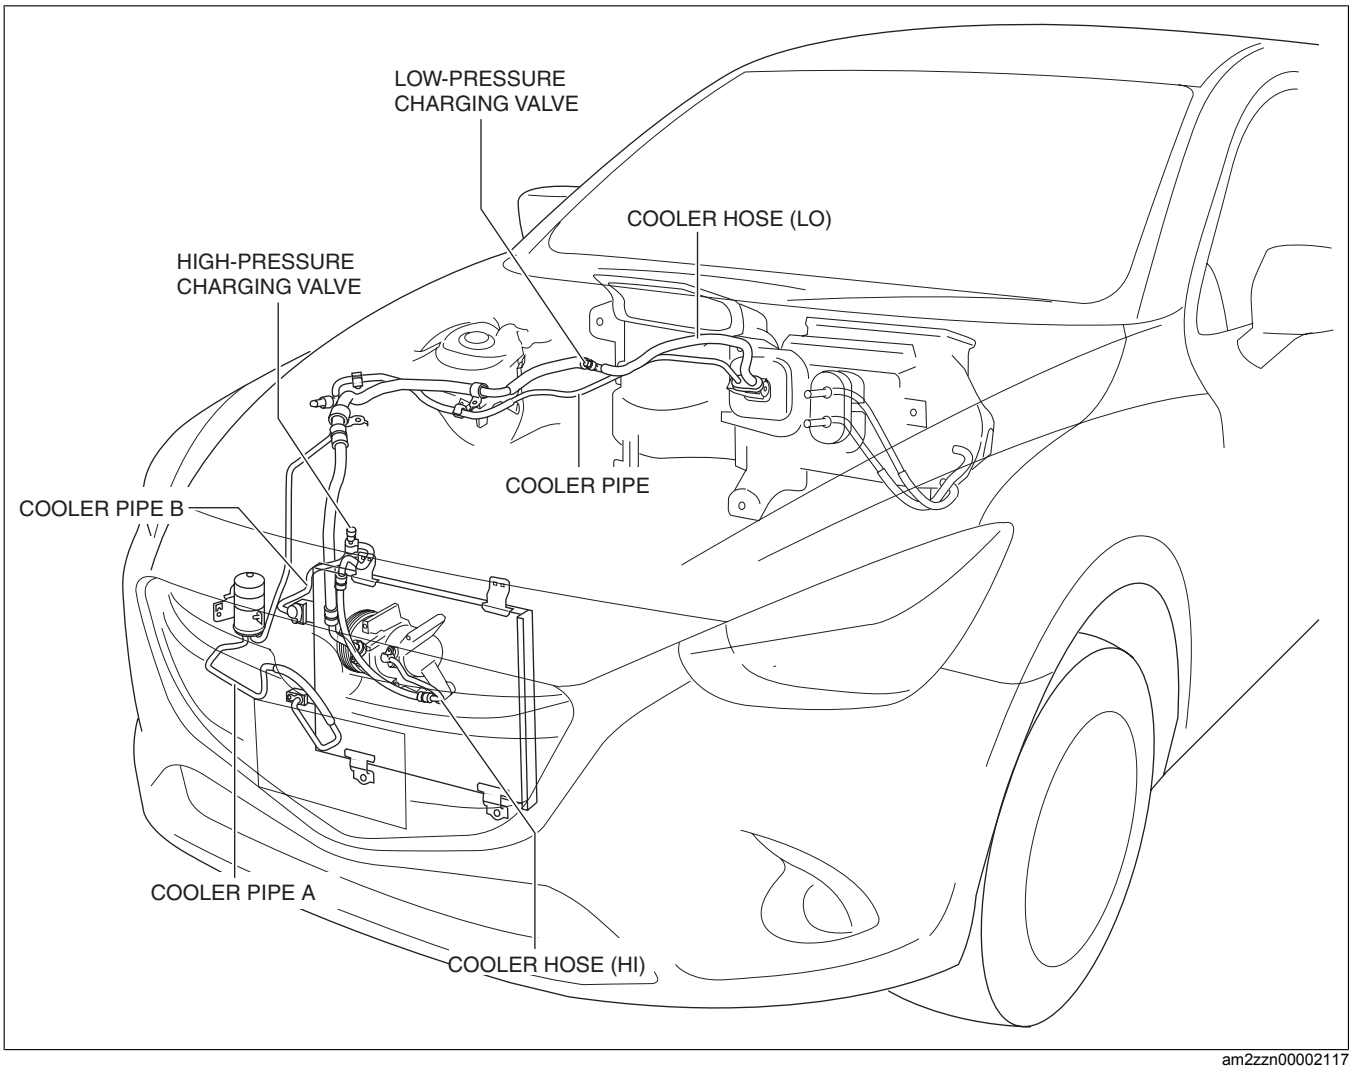

Purpose
- The refrigerant lines connect each of the parts in the refrigerant cycle.

Construction
SKYACTIV-G 1.3, SKYACTIV-G 1.5
- Block-type piping has been adopted to the pipe connection, improving the efficiency of the removal/installation related servicing.
- The pipes in the piping system consist of the following parts.
  - — Cooler hose (HI)
  - — Cooler hose (LO)
  - — Cooler pipe
- The pipes in the piping system are made of aluminum alloy and the hoses are made of rubber (flexible hose).
- A high-pressure charging valve is located on the cooler hose (HI) and a low-pressure charging valve is located on the cooler hose (LO).

SKYACTIV-D 1.5
- Block-type piping has been adopted to the pipe connection, improving the efficiency of removal/installation related servicing.
- The pipes in the piping system consist of the following parts.
  - — Cooler hose (HI)
  - — Cooler hose (LO)
  - — Cooler pipe
  - — Cooler pipe A
  - — Cooler pipe B
- The pipes in the piping system are made of aluminum alloy and the hoses are made of rubber (flexible hose).
- A high-pressure charging valve is located on the cooler hose (HI) and a low-pressure charging valve is located on the cooler hose (LO).
