FRONT FENDER BRACKET

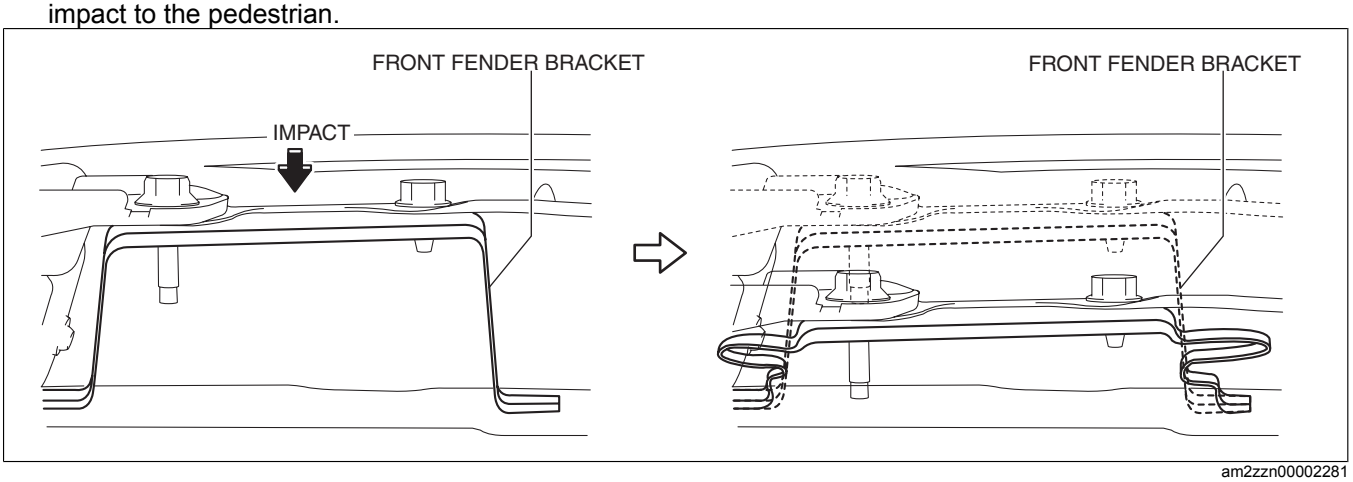

id091000026300

Purpose

- A front fender bracket with a shock-absorbing structure has been adopted to reduce impact to pedestrians in a collision.

Function

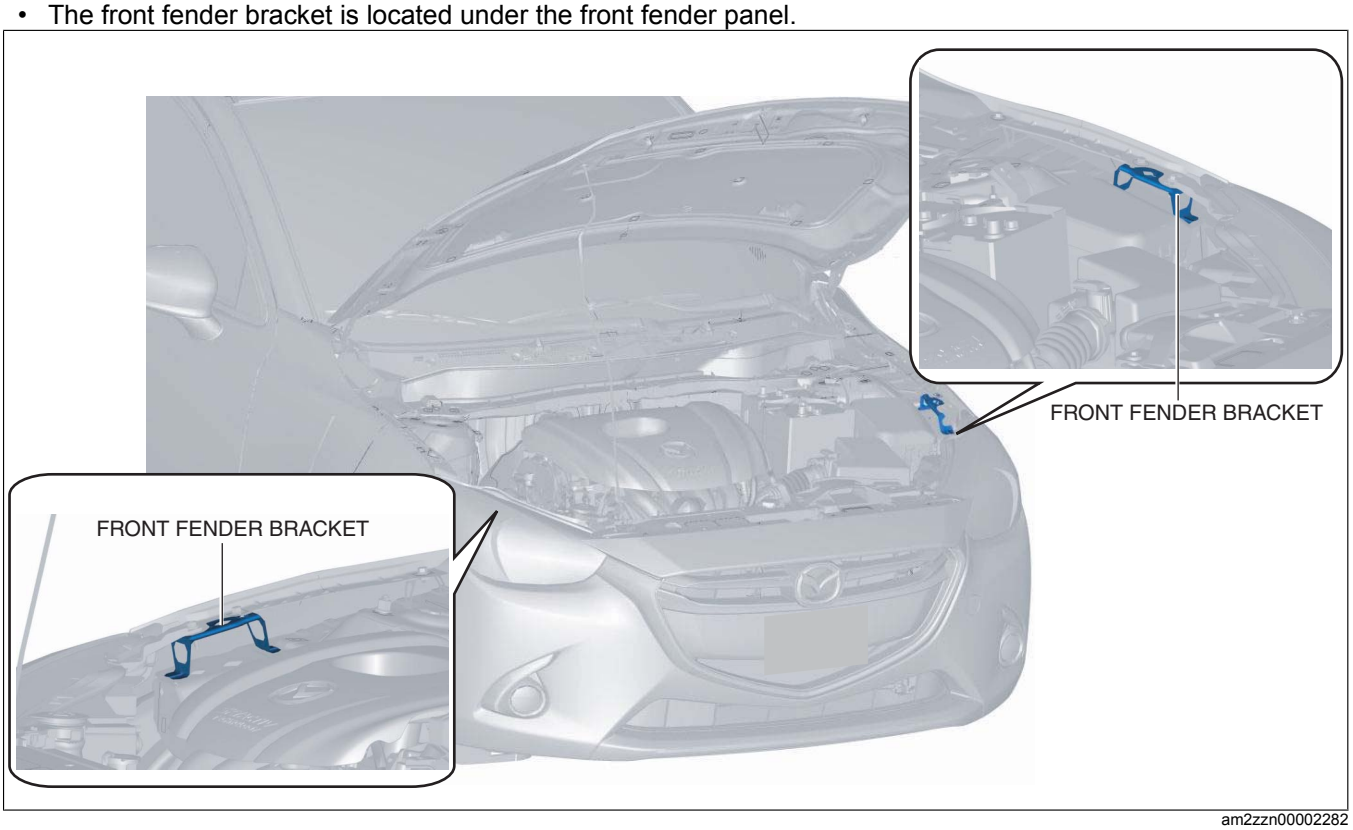

- If a pedestrian contacts the bonnet or the front fender in a collision, the front fender bracket deforms to reduce impact to the pedestrian.

am2zzn00002281

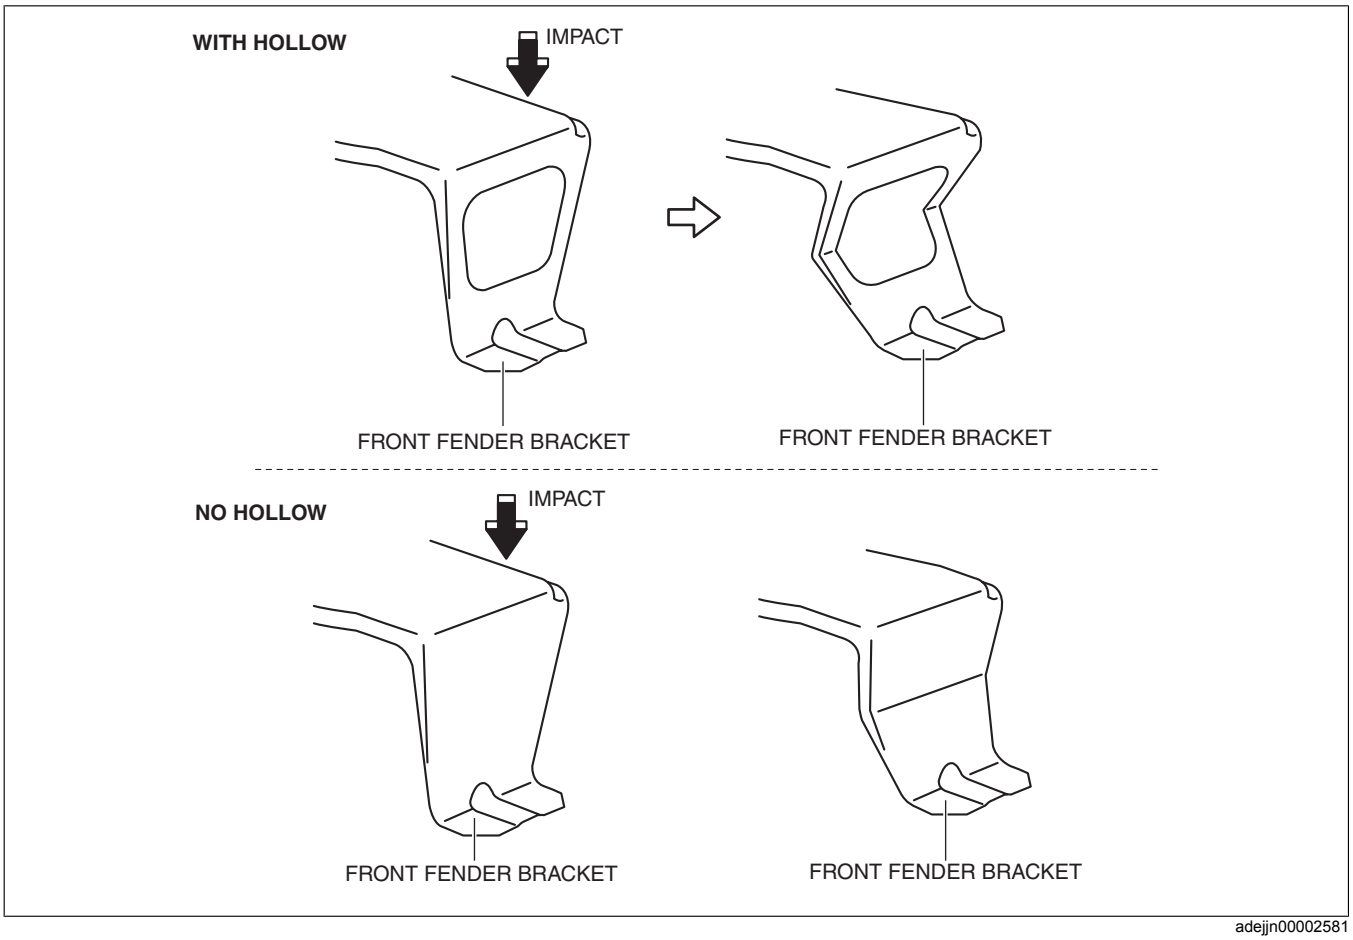

Construction

- The front fender bracket is located under the front fender panel.

am2zzn00002282

- The front/back vertical wall of the front fender bracket each contain a hole which causes the bracket to deform easily in a collision with a pedestrian.
