PEDESTRIAN PROTECTION

id091000026500

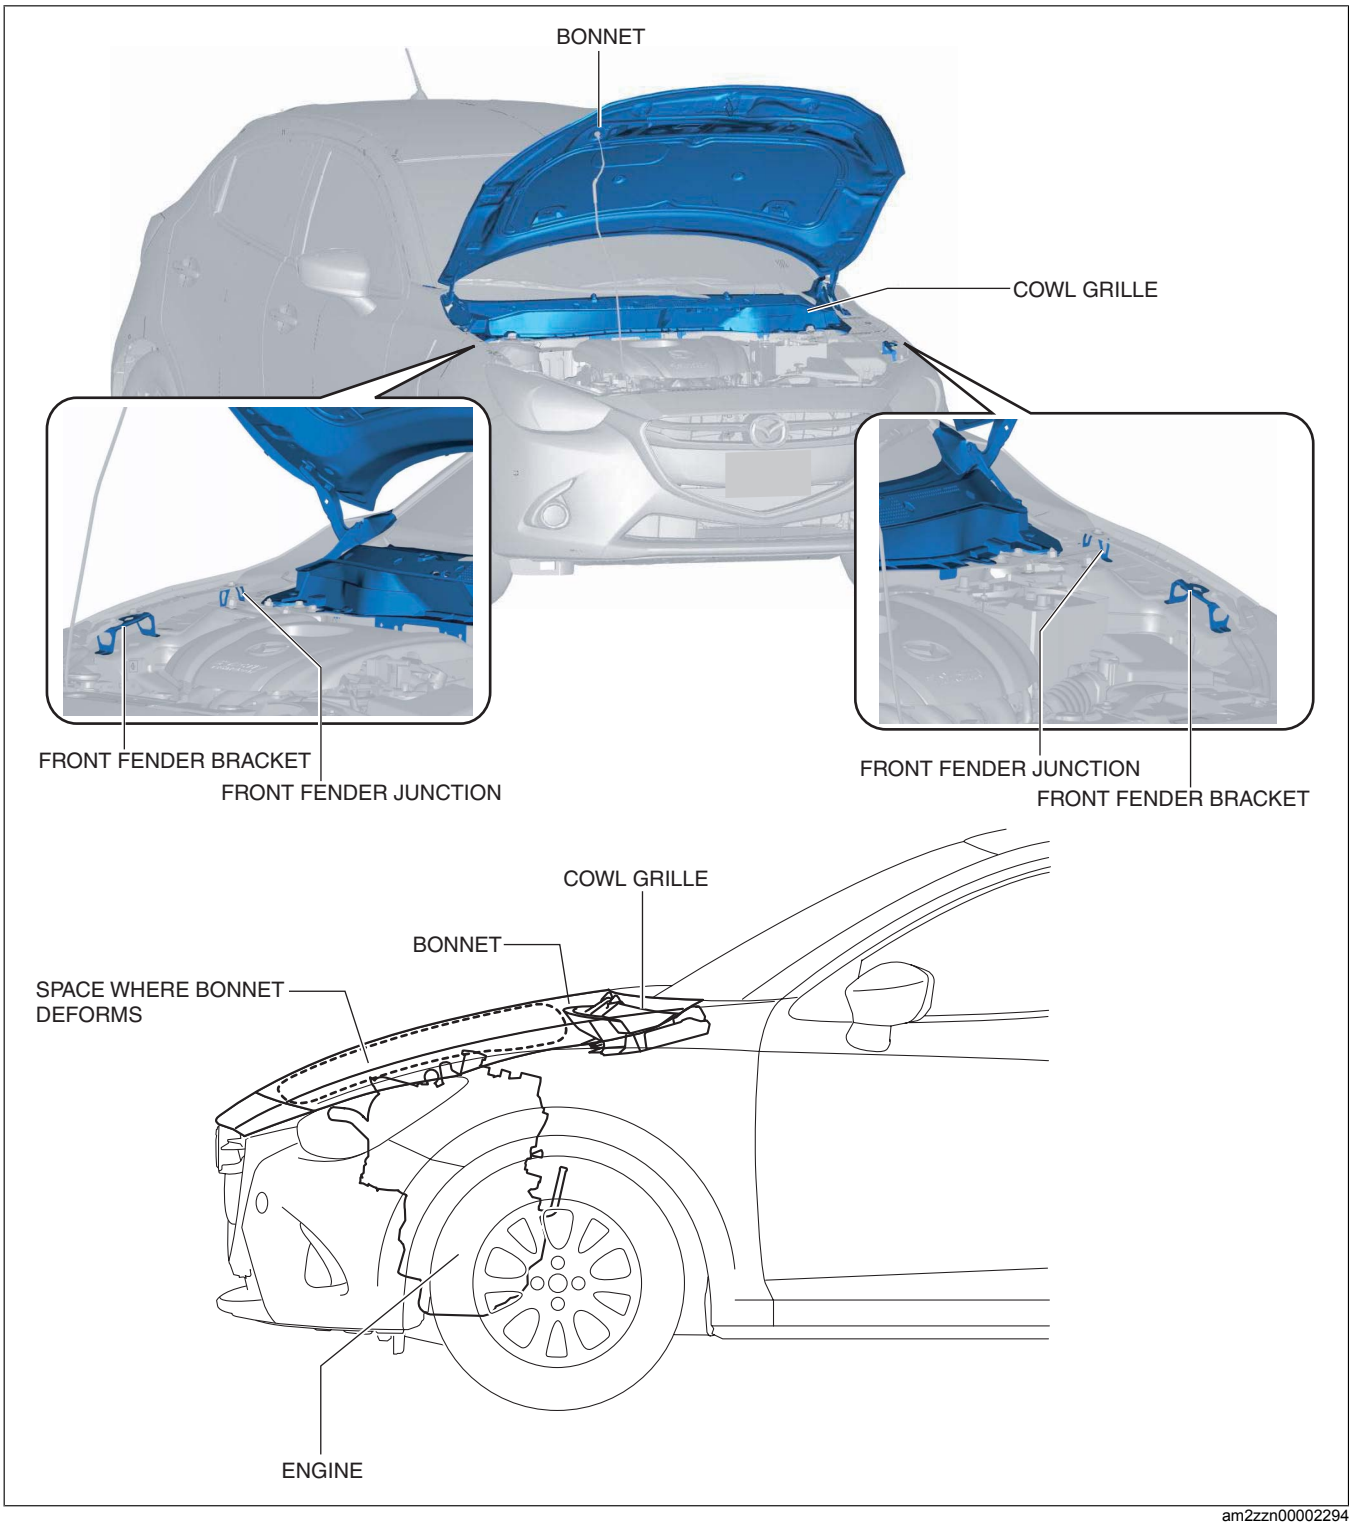

Outline

- The pedestrian protection is for reducing impact and injury to pedestrians in a collision with the vehicle.

Construction

Head protection

- An impact energy absorbing structure has been adopted for the following parts to reduce impact to pedestrians in a collision.
  - Bonnet
  - Cowl grille
  - Front fender bracket
  - Front fender junction
- The impact energy absorbing structure of each part reduces impact to the pedestrian's head.
- A clearance has been assured between the bonnet and the engine so that the bonnet can deform.

am2zzn00002294

Bonnet

- The bonnet has an impact energy absorbing structure so that impact to pedestrians can be reduced in a collision. For details, refer to the [BONNET]. (See BONNET.)

Cowl grille

- The cowl grille has an impact energy absorbing structure so that impact to pedestrians can be reduced in a collision. For details, refer to [COWL GRILLE]. (See COWL GRILLE.)

Front fender bracket

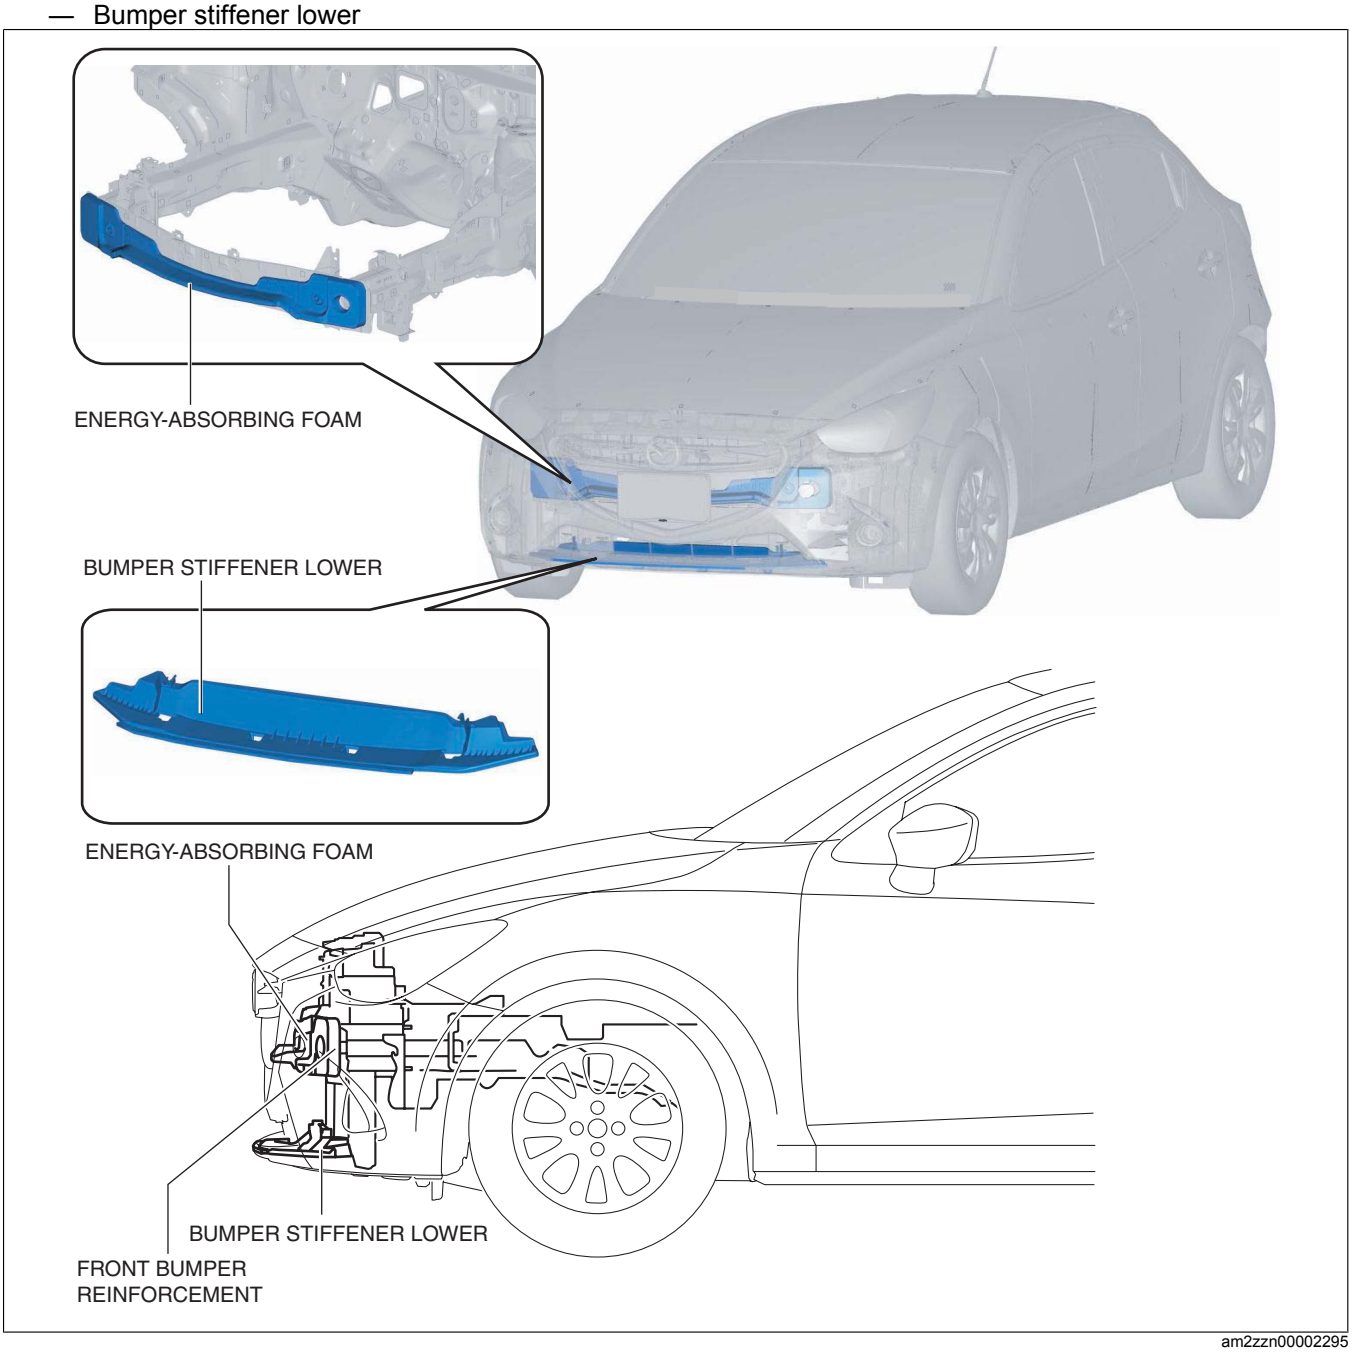

- The front fender bracket has an impact energy absorbing structure so that impact to pedestrians can be reduced in a collision. For details, refer to [FRONT FENDER BRACKET]. (See FRONT FENDER BRACKET.)

Front fender junction

- The front fender junction has an impact energy absorbing structure so that impact to pedestrians can be reduced in a collision. For details, refer to [FRONT FENDER JUNCTION]. (See FRONT FENDER JUNCTION.)

Leg protection

- The following parts have been adopted to the vehicle frontal area to reduce injury to a pedestrian's legs.
  - Energy-absorbing foam
  - Bumper stiffener lower

am2zzn00002295

Energy-absorbing foam

- The energy-absorbing foam is equipped to the front of the front bumper reinforcement to reduce impact to a pedestrian's legs. For details, refer to [ENERGY-ABSORBING FOAM]. (See ENERGY-ABSORBING FORM.)

Bumper stiffener lower

- The bumper stiffener lower reduces injury to a pedestrian's legs caused by the pedestrian's legs going under the vehicle. For details, refer to [BUMPER STIFFENER LOWER]. (See BUMPER STIFFENER LOWER.)
