FRONT FENDER JUNCTION

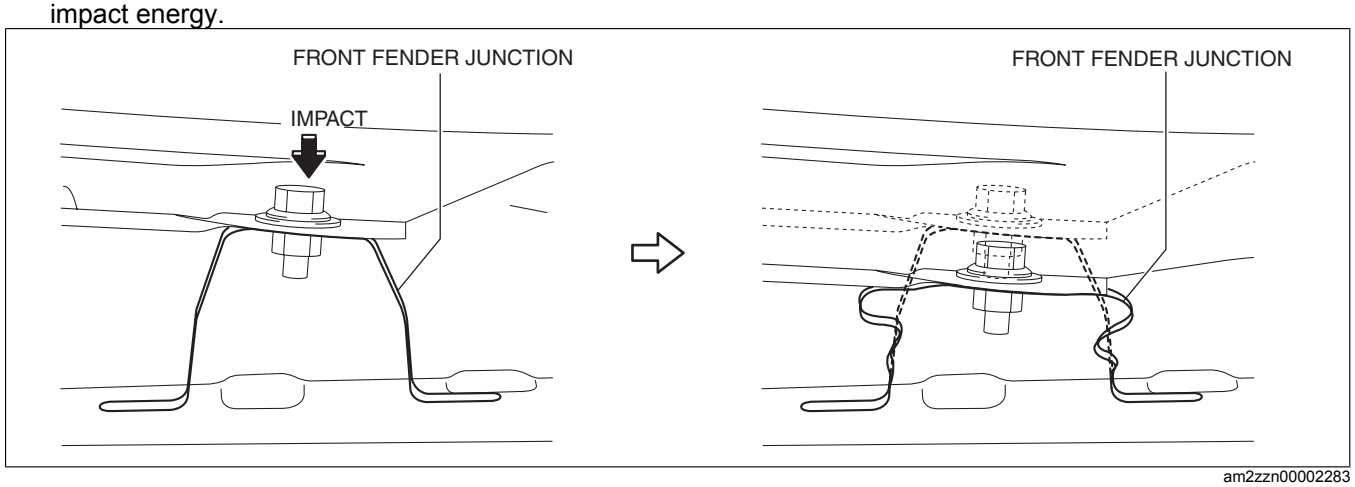

id091000026700

Purpose

- A front fender junction with a shock-absorbing structure has been adopted to reduce impact to pedestrians in a collision.

Function

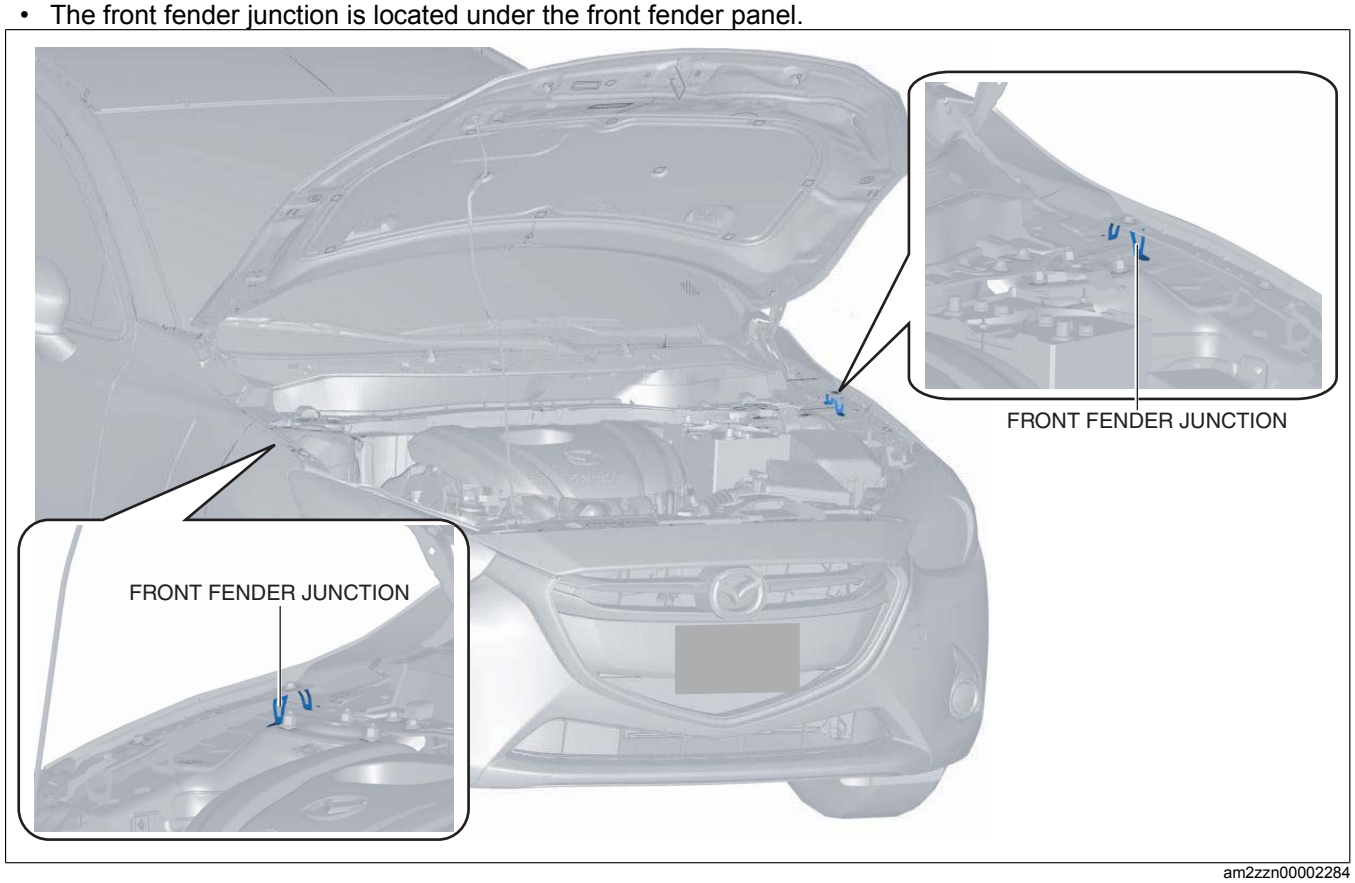

- If a pedestrian contacts the bonnet or the front fender in a collision, the front fender junction deforms to reduce impact energy.

am2zzn00002283

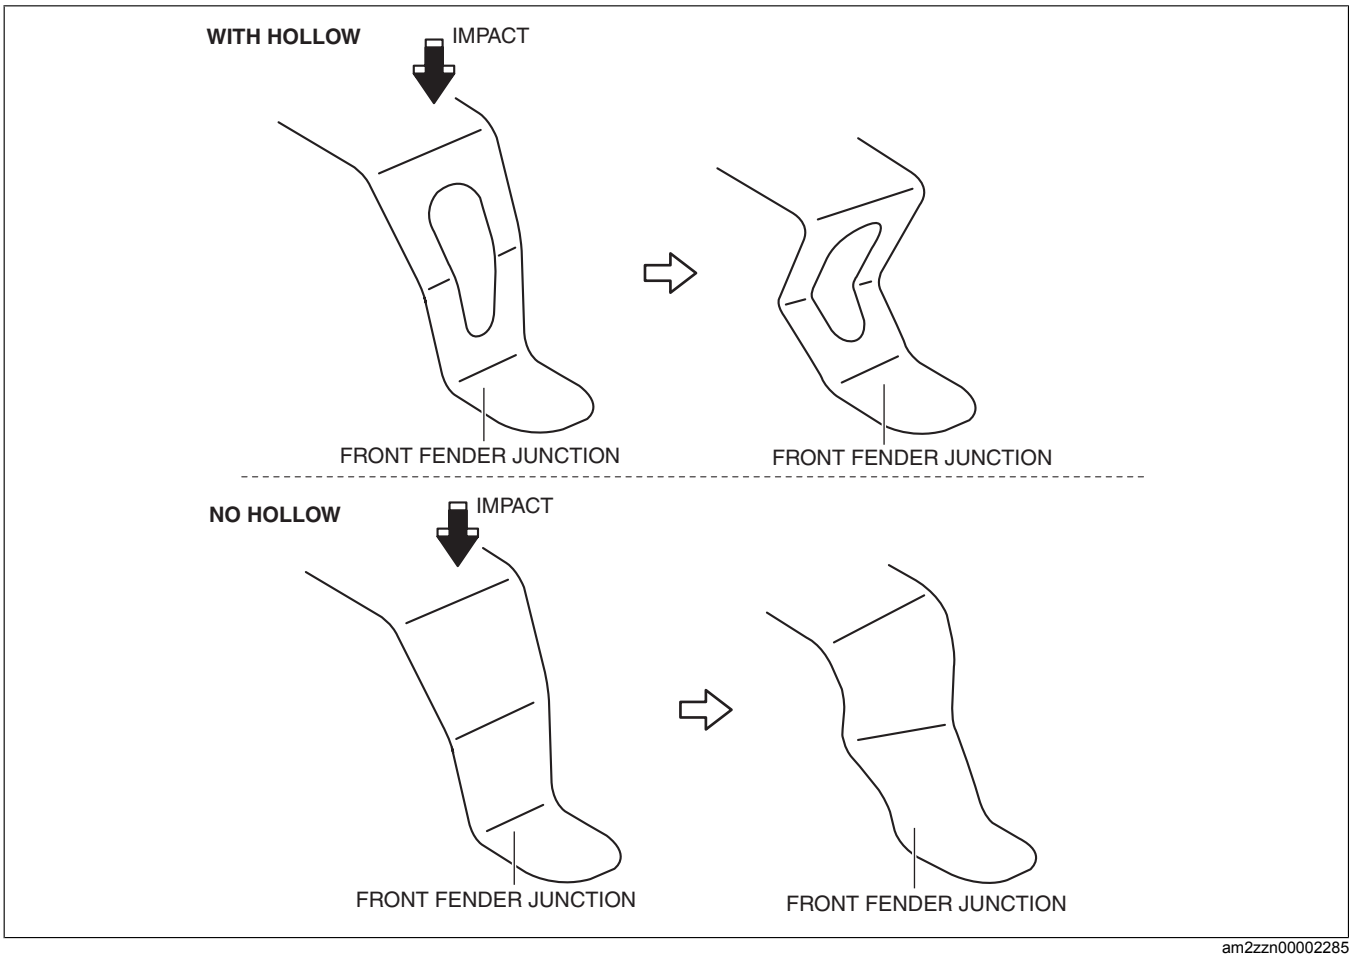

Construction

- The front fender junction is located under the front fender panel.

am2zzn00002284

- The front/back vertical wall of the front fender junction each contains a hole which causes the bracket to deform easily in a collision with a pedestrian.
